### **Eco:Logic Ranked One of Country's Fastest Growing Companies**

Recently ranked on the Inc. 5000 index of the country's Fastest Growing Private Companies, Eco:Logic Engineering in Rocklin was founded in 1993 by five people and now has 160 employees. The company specializes in water and wastewater engineering. "Our objective has always been to produce top-quality, high-value engineering work," said Eco:Logic principal David Bennett. "Growth has simply been a byproduct of that focus." The company will generate about \$30 million of engineering revenue in 2007, he said. "We're one of just a few water/wastewater firms in California that isn't a multinational engineering conglomerate. The folks that own Eco:Logic live here in Placer County and work on projects at Eco:Logic every day. Our overhead is lower, and the revenue that doesn't go to taxes gets spent locally." The company focuses on helping medium-sized and small agencies "because their water issues are every bit as complex as big agencies', but money is short. They need more creative, beyond-textbook solutions, and we can bring that." For more, visit Eco:Logic at <http://www.ecologic-eng.com/> or the Inc. 5000 list at <http://www.inc.com/inc5000/>
